

Parallel Session 6**Monday, July 2, 16:00PM-18:30PM**

Special Session 33	Nonlinear Elliptic and Parabolic Problems in Mathematical Sciences Organizer(s): Yoshihisa Morita, Junping Shi	Location REH-9
16:00-16:30	Jann-Long Chern (Central University, Taiwan) Uniqueness of Solutions in a Gravitational Gauge Field Theory with Coexistence of Vortices and Antivortices	Abstracts p. 147
16:30-17:00	Steven D Taliaferro (Texas A&M University, USA) Isolated Singularities of Nonlinear Polyharmonic Inequalities	Abstracts p. 150
17:00-17:30	Yasuhito Miyamoto (Tokyo Institute of Technology, Japan) Stable patterns and Morse index one solutions	Abstracts p. 148
17:30-18:00	Ping Liu (College of William and Mary, USA) Bifurcation from a Degenerate Simple Eigenvalue	Abstracts p. 148
18:00-18:30	Necibe Tuncer (University of Tulsa, USA) Diffusion Driven Instabilities on Evolving Surfaces	Abstracts p. 150
